## PROJECTS

### Platform Engineering

Mar. 2022 - Present

Nagarro

Java 21, Gradle, Docker, Event-driven, AWS

- Microservices & Framework: Implemented observability, security, database & Kafka starter libraries ensuring comprehensive system functionality & increased development efficiency. Notification service utilizing Kafka connectors.
- **Build Plugins**: Developed plugins for OpenAPI and AsyncAPI/AVRO specifications, facilitating code generation and scaffolding with Projen. Used by around 100 microservices for rapid API-first development.
- Cross-cutting DevOps concerns: Created, managed & improved Docker base images with 58% size reduction & 43% reduction in security vulnerabilities. Used capabilities like multi-stage and multi-arch for increased efficiency.
- Security Protocols: Strengthened security with GitHub Actions checks and established a robust tagging and versioning flow. Achieved 80% & 33% run time reduction respectively in checkstyle & other checks.
- Cost-cutting & performance: Migrated from Spring Boot 3 to Quarkus 3 (native) with perf test metrics showing over 150% throughput improvement or 50% reduced resource consumption & 86% reduced Docker image size.
- Cloud Automation & SRE: Provisioned infrastructure with AWS CDK constructs in TypeScript to manage
   CloudFormation templates & CI/CD pipelines in Bash script; Deployed services with Helm Charts &
   ChartMuseum; System monitoring, alerting & troubleshooting with tools like Splunk, Grafana, Tempo & Prometheus.
- Highlights: Cross-functional, smart, modular, scalable & well-documented.
